An arcadish rally game (no too much no too little but not a simcade for sure) that mimics the nostalgic times of CMR. I pick this game for when I need a break from dirt rally.

Pros:

- Too arcade if you aren't into sim V simcade racing
- Hot seat tournament
- graphically pleasant for its age
- Healthy pool of locations
- 10 scale difficulty settings so you can always find the right difficulty for you
- Cars don't feel the same, not even from the same manufacturer (cause of the team rating system - like moto GP games)

Cons:

- Cars feel too planted to the ground
- Stage repetition. There are 6 stages in every location but is actually one stage with changed start and finish location or in better cases reversed. Most of U turns feel the same wherever you race in.
- Repairs have fixed times (for more or less damaged module)
- Career become boring after a while
- Graphic options (it can be solved through nvidia control center)
- The internet settings. Even though this game is older it still deserves a review. Now in 2018 there are better rally games out there but if you have a potato PC or your mates have potato PC's and can't run the newer games but you're itching for rally action... get this game.

It's fun and easy to master quickly, there's good progression through the WRC series.

The thing that kills this game is variety, I've sunk 30 hours into it and it's basically all I'd play I feel like I've done everything I'd want to do in it. But... if you want a cheap game that can run on anything hit this 2013 beast up.
